

The shortest distance between Wine and Release.

Filter Scanning Microscope + Software.

Turn days into minutes with the fastest, most powerful quality assurance system on the market.

The Wine Industry's Only **Filter Scanning** **Holographic Microscope.**

Immediate Release of Wine

Think of a bottling process with speed and assurance that your filter is working. This can be a reality. With FilterScan you can monitor wine faster and more precisely than anyone. You need to know if yeast has passed through the filter, and if the yeast is alive or dead. Imagine knowing all of this immediately. No delays to your production line. No costly wine recalls. Only quality wine appears on shelves, and your brand integrity is preserved.

Minutes Not Days

FilterScan by 4Deep is the only system on the market that scans in minutes instead of days. Winemakers who discover this technology can revolutionize their production times, all while improving quality. The FilterScan is an exceptional combination of innovation & quality, speed & precision. It truly raises the bar for quality assurance in the wine industry.

We love showing our technology to winemakers.
